Professional Summary

Highly motivated Full Stack Developer with a strong interest in Artificial Intelligence and Machine Learning. Practical experience in building scalable web applications, developing ML models, analyzing datasets, and implementing NLP-based solutions. Proficient in React.js, Node.js, and Python with a solid foundation in core programming and machine learning concepts. Passionate about solving real-world problems through technology with a continuous learning mindset. Actively seeking internship opportunities to gain hands-on industry experience and contribute to impactful software and AI-driven solutions.

Education

Rajiv Gandhi University of Knowledge Technologies, Nuzvid 2023 – 2027
Bachelor of Technology (B.Tech) in Computer Science Engineering CGPA: 9.03

Rajiv Gandhi University of Knowledge Technologies, Nuzvid 2025 – 2027
Minor Degree in Machine Learning

Rajiv Gandhi University of Knowledge Technologies, Nuzvid 2021 – 2023
Pre-University Course (PUC) CGPA: 9.79

Technical Skills

Programming Languages: Python, Java, C, JavaScript
Frontend: HTML, CSS, Tailwind CSS, React.js
Backend: Node.js, Express.js
AI Domains: Machine Learning (ML), Deep Learning (DL), Natural Language Processing (NLP)
Libraries & Frameworks: NumPy, pandas, scikit-learn, Matplotlib
Databases: MySQL, MongoDB
Tools: Git, GitHub, VS Code
Core Concepts: REST APIs, Authentication, Data Structures, Object-Oriented Programming

Experience

Emertxe Information Technologies Jan 2026 – Feb 2026
Full Stack Developer Intern

- Developed a full-stack music player web application (BeatFlow) using React, Node.js, Express, and MongoDB.
- Designed and implemented 5+ REST APIs for user authentication, music streaming, favorites management, and search functionality.
- Integrated Jamendo API to fetch and stream music, enabling dynamic song discovery and playback.
- Built responsive frontend components and optimized API communication for smooth music playback experience.
- Used Git and GitHub for version control, branch management, and collaborative development.
- **GitHub:** github.com/bhavani3420/beatflow-music-player

Projects

AI-Powered Dynamic Route Rationalization System

- **Tech Stack:** Python, PyTorch, Pandas, NumPy, CLSTM, Ant Colony Optimization, Kafka, Google Maps API.
- Spearheaded the development of a machine learning-driven dynamic route optimization system to prevent bus bunching and improve real-time urban transport efficiency.
- Designed and trained a hybrid CNN-LSTM (CLSTM) model for spatial-temporal traffic analysis, achieving **91% delay prediction accuracy**.
- Implemented Ant Colony Optimization (ACO), reducing predicted route delays by **18–22%**.
- Validated system performance using real-time streaming data to ensure scalability and robustness.

BreatheSafe — Personalized Air Quality Health Platform

- Built a full-stack platform providing personalized health guidance using real-time Air Quality Index (AQI) data and user profiles.

- Implemented secure authentication and 5+ REST APIs to manage user data, health profiles, and report generation
- Integrated Gemini API for AI-powered health recommendations and Twilio for SMS alerts when AQI exceeds safe levels.
- Generated downloadable health reports recommending mask types, safe outdoor timings, and exposure precautions based on AQI severity.

BeatFlow – Music Streaming Web Application

- Developed a full-stack music streaming platform enabling users to search and stream songs using the YouTube API
- Implemented secure authentication and session management with signup/login, protected routes, and token-based password reset using Mailtrap.
- Built features for favorites management and custom playlist creation to organize and access preferred songs.
- Designed an interactive music player with play, pause, seek, and track navigation, with optimized media delivery using ImageKit CDN.

Musentia — Facial Emotion-Based Music Recommendation System

- Developed an end-to-end AI system for real-time facial emotion detection and personalized music recommendation
- Trained a CNN-based emotion classifier integrated with MediaPipe, achieving **87% accuracy**.
- Designed a modular pipeline linking emotion recognition with a dynamic recommendation engine.
- Developed an interactive Streamlit interface for real-time emotion capture and playlist generation.

LinguaConnect - Real-Time Language Learning & Video Communication Platform

- Developed a full-stack platform enabling users to connect with global language partners through real-time chat and video calls.
- Implemented secure authentication, onboarding flow, and protected routes using JWT.
- Built real-time communication features including friend requests, messaging, and one-to-one video calls using Stream Video SDK.
- Developed RESTful APIs using Node.js, Express.js, and MongoDB and built a responsive UI with React and Tailwind CSS.

Achievements

- Secured 3rd Prize at Hackavyuha'25 (SRM AP GFG Hackathon) for Full Stack + Gemini API project (BreatheSafe).
- Completed NPTEL Certification in Artificial Intelligence: Search Methods for Problem Solving conducted by IIT Madras (Score: 75%).
- Selected as National Semi-Finalist in Flipkart Grid 7.0.

Extra-Curricular Activities

- GSoC'25 Contributor – Actively contributed to open-source projects and engaged in collaborative development discussions.
- Locus Team Member – Currently working on a location-based community platform enabling users to connect with nearby people and ask context-specific questions, reducing irrelevant information overload.
- InfoTechies Club Member – Participated in technical discussions, project ideation, and hackathons focused on innovative software solutions.
